

BruxZir™

TOTAL ZIRCONIA CROWNS & BRIDGES

Reasons to consider
BruxZir Total Zirconia

- ❖ **BruxZir** is virtually chip-proof, making it ideal for bruxers and grinders who have destroyed other restorations.
- ❖ More esthetic than metal and full-cast gold crowns.
- ❖ Zirconia has proven biocompatibility, having been used in medical implants.

BruxZir™
Virtually Unbreakable

High Strength Crown Options

BruxZir™ Total Zirconia is made from virtually unbreakable, biocompatible medical-grade zirconia—the same element used to make bulletproof military armor. Because **BruxZir** has no porcelain overlay, it is more resistant to chipping, cracking or breaking in the mouth. This makes **BruxZir** ideal for bruxers and grinders, who have broken their natural teeth or porcelain restorations in the past.

Dentists have long relied on full-cast gold and porcelain metal crowns & bridges for long-term durability and strength. But with the introduction of **BruxZir**, an equally strong solution is now available. What's more, when compared side-by-side to full-cast gold and porcelain metal crowns, **BruxZir** Total Zirconia is the most natural-looking choice.
